AQUAÇAÍ BOTTLED WATER QUALITY REPORT

EUROFUSION, S.A.
SECTOR LA VALDEZA, CAPIRA
PANAMA 0832-01235, PANAMA
1-888-944 AQUA
+507-248-6530

Introduction

AQUAÇAÍ is natural artesian water bottled at source and extracted from an aquifer deep below the forest surface, located at La Valdeza de Capiira in the Republic of Panamá. This water naturally absorbs minerals by slowly filtering through volcanic rocks and it is bottled without direct human contact.

AQUAÇAÍ meets all local, federal, state and international bottled water regulations and our company Eurofusion, S.A. is registered with the U.S. Food and Drug Administration (FDA). These extremely high standards of quality are a warranty for the safety of our water provided to the consumer.

AQUAÇAÍ TYPICAL MINERAL ANALYSIS REPORT:

Report Date: 02-SEP-2021

Sampling Period: 03-AUG-2021

Typical Mineral Analysis	AQUAÇAÍ Water
Bicarbonate as CaCO ₃	138.5 mg/L
Calcium	38 mg/L
Chloride	8 mg/L
Fluoride	0.5 mg/L
Magnesium	4.2 mg/L
Sodium	28 mg/L
Silica	26 mg/L
Sulfate	28 mg/L
Potassium	0.96 mg/L
Nitrate	ND
pH	6.66
Solids Total Dissolved	220 mg/L
Alkalinity as CaCO ₃	140 mg/L

THE STATE OF CALIFORNIA REQUIRES THE FOLLOWING INFORMATION TO BE PROVIDED TO BOTTLED WATER CONSUMERS, UPON REQUEST

EUROFUSION, S.A.

SECTOR LA VALDEZA, CAPIRA
PANAMA 0832-01235, PANAMA

Terminology:

“Statement of quality” (SOQ) – The standard (statement) of quality for bottled water is the highest level of a contaminant that is allowed in a container of bottled water, as established by the United States Food and Drug Administration (FDA) and the California Department of Public Health. The standards can be no less protective of public health than the standards for public drinking water, established by the U.S. Environmental Protection Agency (EPA) or the California Department of Public Health.

“Public health goal (PHG)” – The level of a contaminant in drinking water below which there is no known or expected risk to health. PHGs are set by the California Environmental Protection Agency.

“Maximum contaminant level (MCL)” – The highest level of a contaminant that is allowed in drinking water, established by the U.S. Environmental Protection Agency (EPA) or the California Department of Public Health. Primary MCLs are set as close to the PHGs as is economically and technologically feasible.

“Primary drinking water standard” – MCLs for contaminants established by the U.S. Environmental Protection Agency (EPA) or the California Department of Public Health that affect health along with their monitoring and reporting requirements, and water treatment requirements.

FDA and State of California Standards

AQUAÇAÍ meets all FDA and CDPH water quality standards.

Our product has been thoroughly tested in accordance with federal and California law. Our bottled water is a food product and can not be sold unless it meets the standards established by the U.S. Food and Drug Administration and the California Department of Public Health. The following statements are required under California law:

"Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the United States Food and Drug Administration, Food and Cosmetic Hotline (1-888-723-3366)."

"Some persons may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons, including, but not limited to, persons with cancer who are undergoing chemotherapy, persons who have undergone organ transplants, persons with HIV/AIDS or other immune system disorders, some elderly persons, and infants can be particularly at risk from infections. These persons should seek advice about drinking water from their health care providers. The United States Environmental Protection Agency and the Centers for Disease Control and Prevention guidelines on appropriate means to lessen the risk of infection by cryptosporidium and other microbial contaminants are available from the Safe Drinking Water Hotline (1-800- 426-4791)."

"The sources of bottled water include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water naturally travels over the surface of the land or through the ground, it can pick up naturally occurring substances as well as substances that are present due to animal and human activity.

Substances that may be present in the source water include any of the following:

1. Inorganic substances, including, but not limited to, salts and metals, that can be naturally occurring or result from farming, urban storm water runoff, industrial or domestic wastewater discharges, or oil and gas production.
2. Pesticides and herbicides that may come from a variety of sources, including, but not limited to, agriculture, urban storm water runoff, and residential uses.
3. Organic substances that are byproducts of industrial processes and petroleum production and can also come from gas stations, urban storm water runoff, agricultural application, and septic systems.
4. Microbial organisms that may come from wildlife, agricultural livestock operations, sewage treatment plants, and septic systems.
5. Substances with radioactive properties that can be naturally occurring or be the result of oil and gas production and mining activities."

"In order to ensure that bottled water is safe to drink, the United States Food and Drug Administration (FDA), and the California State Department of Public Health (CDPH), prescribe regulations that limit the amount of certain contaminants in water provided by bottled water companies."

California law requires a reference to FDA's website for recalls:
